- ◆ Media Mail
- ◆ Priority Mail®
- ◆ Express Mail®
- ◆ Global Express
- ◆ Global Priority
- ◆ Letter-Post Air
- ◆ Letter-Post Economy
- ◆ Parcel Post-Air
- ◆ Parcel Post-Economy

Ongoing carrier compliance is one of Varsity's top priorities. Varsity works directly with customers and carriers to ensure the most timely rate updates and critical compliance changes to labels, manifests, service types, and value-added services.

Varsity's United States Postal Service (USPS) shipping applications are designed to support all USPS shipping requirements for US origin shipments. USPS specific features and functionality include domestic, international, Express Mail, delivery confirmation, registered mail, restricted delivery, return receipt, signature confirmation, and special handling.

### USPS U.S. Carrier Compliance Kit (CCK)

The USPS U.S. CCK contains all rate, ZIP Code™, and zone data for shipments from a given ZIP Code to any location in the United States. The CCK immediately applies all USPS shipping rules and restrictions to ensure full shipping compliance and the timely delivery of packages.

The Varsity USPS U.S. CCK calculates the volume and postage payable for all USPS shipments by service type. This information is then printed on postage statements, manifests, and labels. Labels include the required indicia used to denote meter and package identification numbers as well as barcodes and trace numbers for delivery confirmation.

Varsity ensures that USPS shippers meet all manifest mailing requirements. Varsity produces USPS-approved manifests and postage statements. USPS certification ensures postage charges are accurately calculated. And the CCK supports electronic manifesting for Express Mail packages.

### Export Documentation

Varsity's optional Export Documentation module can automatically generate the required export documents based on shipping requirements and compliance rules. Documents available include USPS 2976 and 2976A Customs Declaration forms, Canadian Customs Invoice, Certificate of Origin (NAFTA and Standard), Commercial Invoice, and Shipper's Export Declaration.

### ShipTalk™ Delivery Confirmation

The optional ShipTalk Delivery Confirmation module automatically completes batch transmission uploads of shipment data for parcel tracking and delivery confirmation. Delivery status information from USPS is then automatically updated in the ShipSoft database. The ShipTalk module supports standard and delivery confirmation labels with bar codes to track delivery details.

**Additional Zone Databases (AZD)**

Varsity's AZDs make expanding your shipping operations to new locations easy. The AZD enables one-step importing of complete rate and routing data for different originating ZIP Codes to quickly provide shipping from those new locations.

**Certification Level**

Varsity is MAC certified by USPS for domestic parcel rating, manifesting, and labeling functions.
